## ***Notification of Test Results***

**18 April 1994**

This notice documents the results of an Air Force CALS Test Bed (AFCTB) Quick Short Test Report (QSTR) evaluation of data submitted by:

### **Texas Instruments**

Identified as follows:

Title:	<b>Technical Publication Transfer</b>
Program:	<b>TOW ITAS</b>
Program Office:	<b>U. S. Army Missile Command</b>
Contract No.:	<b>DAAH01-93-C-0206</b>
QSTR No.:	<b>AFCTB-ID 94-026</b>

Received on the following media:     **9-Track Tape**

The results of the QSTR evaluation are as follows:

MIL-STD-1804A Standard	<b>Fail</b>
MIL-STD-1840A Media Format:	<b>Fail</b>
MIL-D-28000A IGES:	<b>N/A</b>
MIL-M-28001A SGML:	<b>Fail</b>
MIL-R-28002A Raster:	<b>N/A</b>
MIL-D-28003 CGM:	<b>Fail</b>

Formal results with associated disclaimer are documented and available from the AFCTB.

## 1. Introduction

### 1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

## 1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Texas Instrument's interpretation and use of the CALS standards in transferring technical publication data. Texas Instruments used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on a 9-track magnetic tape.

## 2. Test Parameters

Test Plan: AFCTB 94-027

Date of  
Evaluation: 18 April 1994

Evaluator: George Elwood  
Air Force CALS Test Bed

### **3. 1840A Analysis**

#### **3.1 External Packaging**

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

#### **3.2 Transmission Envelope**

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

##### **3.2.1 Tape Formats**

The tape was run through the AFCTN *Tapetool* v1.2.10 utility. No errors were encountered while evaluating the contents of the tape labels.

The tape was read using XSoft's *CAPS read1840A* utility without any reported errors in the media. Other errors were reported in the CALS headers and only one of the two documents was read off the tape.

The tapes physical structure meets the requirements defined in MIL-STD-1840A and ANSI x3.27.

### 3.2.2 Declaration and Header Fields

Sixty-seven errors and 110 notes were reported in the Document Declaration file and data file headers. Both document sets on the tape had similar errors.

The first error was missing data in the file count record. This record had no value indicating no data files. Both *Tapetool* and the XSoft tape utility reported this error.

filcnt:

\*\*\* ERROR (MIL-STD-1840A; 5.1.1.2) - Value missing after Document Declaration header field.  
\*\*\* NOTE - The header record will be given the value NONE.  
\*\*\* NOTE - Correction made in new Document Declaration Header File.

Because there was no value in the filcnt record, *Tapetool* assumed product data, then generated multiple errors and notes in the rest of the files.

txtfilid: W

\*\*\* ERROR (MIL-STD-1840A; 5.1.4.1) - Invalid 'txtfilid:' value for product data. Expected => NONE  
\*\*\* NOTE - The header record will be given the value NONE.  
\*\*\* NOTE - Correction made in new Text Header File.

The last type error was in the numbering of the files. The tape started with file D001T001, D001G001 and D001H001 followed by D001C001. The file numbers start with D001?001 and increment from there. The first CGM file should have been named D001C004.

Evaluating numbering scheme...

\*\*\* ERROR (MIL-STD-1840A; 5.1.3) - The data files for Document D001 were not numbered properly.  
\*\*\* NOTE (MIL-STD-1840A; 5.1.3) - The first data file for a Document shall use "001" and the number shall increment sequentially for each file of the Document so that each file has a unique file name.

This portion of the tape does not meet the requirements defined in MIL-STD-1840A.

---

## 4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included in this evaluation.

## 5. SGML Analysis

The AFCTB has several parsers available for evaluating submitted DTD and text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or text files required by each system are not documented in the report.

The tape contained two text files, two DTDs, and two Format Output Specification Instances (FOSIs). During the inspection of the files it was noted that the DTDs were MIL-M-38784C, Amendment C, which is the most current DTD. The text file contained the concrete syntax, the DTD listed above and the text file. It was necessary to break this file apart in order to use some of the parsers.

The text and DTD files were evaluated using the Exoterica *Validator exl* parser with no reported errors.

The text and DTD files were tested using the Exoterica *XGMLNormalizer* parser. No errors or warnings were reported in any of the SGML files.

The text and DTD files were evaluated using McAfee & McAdam's *Sema Mark-it v2.3* parser. No errors or warnings were reported in any of the SGML files.

The text file was imported into ArborText's Adept software. File 9427-1 DTD parsed without a reported error. The included FOSI had an error that caused the system to report a segmentation fault. File set 9427-2 DTD and the FOSI parsed without a reported error. When importing the document into the publisher, an error was reported in the file with the "tfoot" and "thead" tags.

According to Chris Moffett of ArborText, Inc., "This (or These) warning(s) may be due to a syntax error in the DTD."

The DTD and text files parsed without a reported error through several commercial parsers. The FOSI in the first document set would not parse while the second document set parsed without a reported error. A problem occurred during an attempt to publish. The SGML files do not meet the CALS MIL-M-28001A specification.

## 6. Raster Analysis

No Raster files were included in this evaluation.

## 7. CGM Analysis

The tape contained 27 CGM files. The files were evaluated using ATC's *MetaCheck* with CALS options. Files D001C005, C013 and D002C001 reported basic CGM errors. These errors kept these files from meeting the CALS MIL-D-28003 specification.

The CGM files were evaluated using the beta AFCTN *validcgm* utility. This utility reported errors in all files. Note, this utility is a beta test and not used for pass/fail.

The AFCTB has several tools for viewing CGM files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

All files were viewed using at least three difference software tools. Because of the number of files submitted, not all files were evaluated using all available tools. Files D001C004 (C104), D001C020 (C120), and D002C001 (C201) were selected for detailed inspection.

The CGM files were converted using ArborText's *cgm2draw* utility. File C201 had two degraded primitives reported.

---

The resulting files were read into Island Software's *IslandDraw* v3.1, displayed and printed. All files displayed errors. Typical of files generated using Interleaf CGM tools, some entities were flipped 180 degrees vertically. These circle and oval entities are displayed along the top of the image. A font change in file C120 resulted in a script font being used by some text.

According to Chris Moffett of ArborText, Inc. "This (or These) problem(s) may be due {to} the method in which the original file was generated."

All files were read into Carberry's *CADLeaf* software and displayed. No errors were reported during this process. The resulting images appeared to be correct with no noted errors.

The files were read into IDA's *CALSVIEW*. File C201 had reported geometric errors. The other files displayed correctly.

The files were imported into Micrografx's *Designer* without a reported error. File C104 had missing lines. An oval entity was noted in the upper top of the paper. The light output is the result of the color. File C120 appeared to be complete. File C201 had several missing entities and was unusable.

According to Michael Harrison of Micrografx, Inc., "Micrografx is aware of the problems associated with reading these files and is working on a solution to be implemented in a future release of our products."

The files were imported into Lotus' *Freelance* and displayed with no reported errors in any of the three selected files.

The files were imported into SPC's *Harvard Graphics* v3.05 with a reported line style error for file C201. The files appear to be complete and correct with the exception of some minor distortion in file C201.

While trying to read the files into Inset Systems' *HiJaak Pro*, a real precision error was reported on all three files. Nothing displayed.

The files were imported directly into Island Software's *IslandDraw* v4.0 without a reported error. File C201 had some minor added lines noted.

The files were read into InterCAP's *X-Change* without a reported error. File C120 had the font changed in some text to script.

The files were imported into Corel's *Ventura Publisher* without a reported error with the exception of C201. This file would not import and an error was generated. The dotted lines in file C104 were displayed as solid.

Because of the reported errors in file C105, C113 and C201, the files do not meet the specification defined in MIL-D-28003.

## 8. Conclusions and Recommendations

The tape from Texas Instruments had errors in the CALS document declaration file. The filcnt record had no value. Additionally, the files were not numbered per the MIL-STD-1840A requirements. The physical tape structure does not meet the CALS MIL-STD-1840A requirements.

The SGML files parsed without a reported error using several commercial products. Document set one would not compile on the ArborText system because of errors in the FOSI. Using the included ArborText FOSI, Document Set two compiled, but it contained an error in the "tfoot" which kept it from being published. The first six pages were displayed correctly. The SGML files do not meet the MIL-M-28001A specification due to the problem with the FOSI.

Three of the 27 CGM files reported basic CGM errors. For this reason, the CGM files do not meet the CALS MIL-D-28003 specification.

The tape does not meet the CALS MIL-STD-1840A requirements, due to the errors in the SGML and CGM files, and the physical tape structure.

Tracing not selected.

===== CGM Conformance Violation Report =====

Bulletin 2001: Element Class/ID: 4/7 Offset: 43038 octets Element No. 3443  
Insufficient parameter data for this element.

Bulletin 2001: Element Class/ID: 4/7 Offset: 43258 octets Element No. 3460  
Insufficient parameter data for this element.

Bulletin 2001: Element Class/ID: 4/7 Offset: 43506 octets Element No. 3478  
Insufficient parameter data for this element.

Error 6076: Element Class/ID: 4/18 Offset: 43722 octets Element No. 3492  
The three specifying points of the ELLIPTICAL ARC element are invalid;  
they must be distinct points.

Bulletin 20012: Element Class/ID: 4/13 Offset: 44694 octets Element No. 3546  
Warning; CIRCULAR ARC 3 POINT with coincident/collinear points.

Error 6076: Element Class/ID: 4/18 Offset: 70224 octets Element No. 5244  
The three specifying points of the ELLIPTICAL ARC element are invalid;  
they must be distinct points.

Error 6076: Element Class/ID: 4/18 Offset: 80688 octets Element No. 5827  
The three specifying points of the ELLIPTICAL ARC element are invalid;  
they must be distinct points.

Bulletin 20012: Element Class/ID: 4/13 Offset: 82852 octets Element No. 5967  
Warning; CIRCULAR ARC 3 POINT with coincident/collinear points.

Error 6076: Element Class/ID: 4/18 Offset: 85306 octets Element No. 6139  
The three specifying points of the ELLIPTICAL ARC element are invalid;  
they must be distinct points.

===== CALS CGM Profile (MIL-D-28003) Report =====

No profile discrepancies detected.

===== Conformance Summary Report =====

Name of CGM under test: i:\94027\c201.cgm  
Encoding : Binary

Pictures Examined : All  
Elements Examined : All  
Bytes Examined : All

BEGIN METAFILE string : "Version 5.42, ITAS1\_cgm.sty, 03/25/94 10:00:10"  
METAFILE DESCRIPTION : "Interleaf Inc. MDL/G CGM 1992 \*\*\*  
MIL-D-28003/BASIC-1"

Picture 1 starts at octet offset 396; string contains: "ITAS1"

Conformance Summary : This file is not a conforming CGM.  
Consequently, it does not meet the  
CALS CGM Profile (MIL-D-28003).

Summary of Testing Performed and Errors Found:

1 Pictures Tested  
6233 Elements Tested  
86726 Octets Tested

0 Illegal CGM Elements	1000 -	1999
3 Incorrect CGM Element Lengths	2000 -	2999
0 CGM State Errors	3000 -	3499
0 Required CGM Elements Missing or Wrong	4000 -	4499
4 CGM Parameter Values Out of Range	6000 -	6499
0 CGM Structure Errors	7000 -	7499
7 *** CGM Errors Found (total)	***	
0 Profile State Errors	3500 -	3999
0 Illegal Profile Elements	4500 -	4999
0 Profile Parameter Values Out of Range	6500 -	6999

---

0 Profile Data Limits Exceeded	8500 -	8999
0 Other Profile Constraints Violated	9500 -	9999
0 *** Profile Violations Found (total) ***		

2 Warnings (Advisory Remarks)	20000 -	20999
-------------------------------	---------	-------

3 distinct errors and warnings were reported.

===== End of Conformance Report =====
